

Process Control - Nitrogen Generators - Turbine Generator Integration - Waste Water Treatment

Design.
Procurement.
Manufacturing.
Installations.
Refurbishment.

Sorensen Systems is your single source supplier providing innovative solutions for process control, nitrogen generators, water-to-wire turbine-valve-controls integration and engineered motion control systems.

Sorensen Process Solutions provides for regulatory compliance, testing, verification and certification required to facilitate discovery, process retrofits, process scale-up, process system integration and contractor management.

Sorensen Governor provides for new installations, refurbishment projects and station automation for the hydroelectric, power generation, water and waste-water industries.

Sorensen Nitrogen Generators offers custom-designed on-site PSA (pressure swing adsorption) and membrane nitrogen generators for customers in the chemical, food processing, pharmaceutical, metal processing and other industries.

Sorensen Engineered Systems provides turnkey fluid power and electrical control systems utilizing hydraulic, pneumatic, electrical and electronic systems to meet critical motion control requirements.

- Turnkey process equipment
- Facility planning, installation
- Testing, verification, certification
- UL 508 control systems

- Turbine generator integration
- Water-to-wire integrated systems
- Gate and valve operating systems
- Water and waste-water treatment

- PSA nitrogen generators
- Membrane nitrogen generators
- On-site nitrogen generators
- Purity levels up to 99.995 percent

- Turnkey motion control systems
- In-house engineering design
- Mechanical, hydraulic, pneumatic
- UL, CE, ISO 9001:2000 certified
